Reviewer's report

Title: Altered PPP2R2A and Cyclin D1 expression defines a subgroup of aggressive luminal-like breast cancer

Version: 4  Date: 16 January 2015

Reviewer: marco velasco

Reviewer's report:

The authors describe that the analysis of combined expression of PPP2R2A and Cyclin D1 by IHC may be useful as a prognosis tool. The manuscript address an important issue (the need for finding better ways to quickly and inexpensively classify breast tumors into clinical-relevant subgroups) with adequate experimental designs and proper statistical analysis. It is written clearly and carefully edited. I did not find any essential revision. Therefore i think it can be accepted on its present form.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
