Title: Therapeutic effect of intravesical administration of paclitaxel solubilized with poly(2-methacryloyloxyethyl phosphorylcholine-co-n-butyl methacrylate) in an orthotopic bladder cancer model

Version: 2 Date: 19 February 2015

Reviewer: Joshua J Meeks

Reviewer's report:

The authors submit a manuscript detailing a comparison of a new solubilized agent PMB30W for use with paclitaxel (PTX-30W) compared to cremophor. This study uses both cell lines and orthotopic xenotransplants in mice. This work is novel and I recommend acceptance.

1. Title: Accurate
2. Abstract: All elements included
5. Results: The authors show less cytotoxicity to MBT2 cells when exposed to PTX-30W. In vivo, bladder weights were decreased and tumors showed increased uptake by liquid chromatography. Multiple apoptosis assays are commercially available. Do any others demonstrate apoptosis?

In summary, this was a nice paper and I would recommend “accept”
