Reviewer's report

Title: Pazopanib for metastatic pulmonary epithelioid hemangioendothelioma - a suitable treatment option: Case report and review of anti-angiogenic treatment options

Version: 3 Date: 18 March 2015

Reviewer: Sandra Wong

Reviewer's report:

Semenisty and colleagues submit a case report and review of the literature on pazopanib for metastatic pulmonary epithelioid hemangioendothelioma.

This is an interesting topic and one which certainly benefits from this type of case report. Major:

Though not necessarily in keeping with the single cases in Table 1, a recent reference (review of similar topic) should be included: Park et al. CurrOpinOncol 2010;22(4):351-355. The largest series included here is 93 cases. The treatments (presumably non-anti-angiogenic drugs) and outcomes from this paper (Amin et al.) should be summarized.

The case report should include some rationale for the chosen treatment. What other treatments were considered?

Minor:

Why was there a delay in workup/treatment between December 2011 and March 2012?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
