Reviewer's report

Title: A case of metastatic renal cell carcinoma and bile duct carcinoma treated with a combination of sunitinib and gemcitabine

Version: 1 Date: 2 December 2014

Reviewer: Xun Lin

Reviewer's report:

It is an interesting article about the combination therapy of sunitinib and gemcitabine for the treatment of double cancer mRCC and BDC. It presented a case study of one patient.

Major Revisions:

1. The combination therapy of sunitinib and gemcitabine was terminated on Day 13 after its initiation. Did the patient receive any subsequent therapies after that? If yes, can the author please describe the subsequent therapies? Please also clarify whether there was a long-term treatment effect given the short period of the combination therapy?

2. Treatment-induced toxicities from the combination therapy seemed severe. What would the author recommend to another patient with similar disease?

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
