Reviewer's report

Title: Enhanced caveolin-1 expression increases migration, anchorage-independent growth and invasion of endometrial adenocarcinoma cells

Version: 2 Date: 2 March 2015

Reviewer: Filippo Acconcia

Reviewer's report:

This manuscript is well performed and well written and reveals a role for caveolin-1 in endometrial cancer.

The conclusions are supported by the data and, pending minor revision, the manuscript can be accepted.

In detail, I would suggest to change the caveolin-1 WB panel in Figure 3A. In this blot is impossible to see that caveolin-1 protein level has been reduced by lentiviral infection.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
