Reviewer’s report

Title: Multimodality therapy approaches, local and systemic treatment, compared with chemotherapy alone in recurrent glioblastoma.

Version: 2 Date: 6 March 2015

Reviewer: Mohammed Osman

Reviewer’s report:

The manuscript is good. It discusses about a new hope for patients with recurrent GBM by giving surgery/RT with chemotherapy.

It needs minor essential revisions, the authors are required to address all the comments before consideration.

I'll attach a revised form of the manuscript which includes all of my comments. The comments vary from minor changes to some missed data.

- The authors mentioned that there were (No prognostic factors resulted significant to univariate and multivariate analysis with exception of the different modality treatment used).

This needs more clarifications according to my comments.

- The discussion needs some modifications to compare your study by other trials

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
