Reviewer's report

Title: Multimodality therapy approaches, local and systemic treatment, compared with chemotherapy alone in recurrent glioblastoma.

Version: 4 Date: 31 March 2015

Reviewer: Mohammed Osman

Reviewer's report:

The author/s addressed many points, however they fail to address other important points:

1- Please mention which machine used for radiotherapy (IMRT, or CRT) (5GY /F is considered high for reirradiation).

2- Please give more details about toxicity including your follow up period.

2- In result section: The authors are required to provide the data. Where is your data that showed there were no association between survival, factors like age, tumour volume?

There are many trials which confirmed the association of some of these factors with the treatment response upon recurrence. Please either to provide your data in a table or to delete this, and I notice you already mentioned this in the discussion.

3- The authors did not compare their results with others.

I'll be happy to review it upon considering these changes.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
