Reviewer's report

Title: Locally ablative treatment of breast cancer liver metastases: identification of factors influencing survival (the Mammary Cancer Microtherapy and Interventional Approaches (MAMMA MIA) study)

Version: 3 Date: 8 February 2015

Reviewer: jian qiu

Reviewer's report:

The author reported that 59 patients undergoing radiofrequency ablation (RFA), interstitial brachytherapy (BT), or 12 radioembolization (RE) of LMBC as a salvage treatment. Potential factors influencing survival were analyzed in a multivariate Cox model. Although the paper was considered to be of interest, the authors should address the points listed below.

1. What is the purpose of the multivariate analysis for the prognostic factors in this study? Based on the data of multivariate analysis, what did the authors say?
2. There were same language error, which needs some language corrections

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
