Reviewer's report

Title: Collapsing Focal Segmental Glomerulosclerosis Following Long-term Treatment with Oral Ibandronate: Case Report and Review of Literature

Version: 2  Date: 5 March 2015

Reviewer: Solange Moll

Reviewer's report:

Major Compulsory Revisions:
The authors report the unusual case of a patient with collapsing glomerulopathy after oral ibandronate therapy. This case report is unreported, the written English is acceptable and the discussion is interesting.

However, the renal biopsy should be better described and a figure should be added (see the NEJM last issue March 5, 2015, 372:964-968)

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
