Reviewer's report

Title: Collapsing Focal Segmental Glomerulosclerosis Following Long-term Treatment with Oral Ibandronate: Case Report and Review of Literature

Version: 2 Date: 17 March 2015

Reviewer: Chagriya Kitiyakara

Reviewer's report:

Major compulsory revisions:

1) More clinical details needed. e.g. Blood pressure, initial urinalysis or protein creatinine ratio before drug therapy.

2) Pathology: Explain meaning of 13-40% glomeruli sclerosed. State number of gloms. Tubuointerstitial changes, Immunohistochem/EM findings

3) Show picture of glom. Label collapse and podocyte proliferation

4) Provide details on drug doses.

5) Comment on prevalence of FSGS and collapsing FSGS in the Chinese population.

Discretionary revisions

1) Time line showing start of ibandronate and level of proteinuria, albumin and therapy would be interesting.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
