Reviewer’s report

Title: Essential role of miR-200c in regulating self-renewal of breast cancer stem cells and their counterparts of mammary epithelium

Version: 6 Date: 6 July 2015

Reviewer: cynthia yu

Reviewer’s report:

In this manuscript, the authors demonstrate that miR-200c play an important role in regulating the “stemness” of human BCSCs and MaSCs via targeting PDCD10. The study is designed coherently, but lack novelty. Most of the issues I proposed in my earlier review have been answered in this revised manuscript. It is reasonable to accept this article for publication.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
