Reviewer’s report

Title: Assessment and model guided cancer screening promotion by village doctors in China: a randomized controlled trial protocol

Version: 7 Date: 5 July 2015

Reviewer: Johanna E. Maree

Reviewer’s report:

Thank you for addressing all the queries. The context of the study is well described and how this study fits in with the umbrella project has been clarified. The intervention and assessment of the intervention is well described. The aims and objectives are clear and the methods clearly described. Adding "protocol" to the title explained why the manuscript does not present any findings.

Minor essential revisions: There are still minor language issues that needs attention.

Should quasi-experimental not be quasi-experiential? Should the initials of the authors be included in the citations? I think a second round of language editing would be of benefit.

This is such ambitious and important work - good luck with the implementation and I look forward to see the finding.

Level of interest: An exceptional article

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

No conflict of interest.
