Reviewer's report

Title: From Palliative to Curative Treatment - A case of stage IV mucinous adenocarcinoma, successfully treated with metronomic capecitabine in combination with bevacizumab and surgery

Version: 2 Date: 21 August 2015

Reviewer: Andrew Ko

Reviewer's report:

Minor essential revisions:
- In first paragraph of case presentation, describe colonoscopic findings and that the biopsy was obtained via colonoscopy (assuming this is the case).
- Clarify dosing of capecitabine -- 500 mg twice-daily without interruption.
- Describe toxicities, if any, on LDM.
- In Discussion section, last two sentences of paragraph 4 (p. 7, lines 153-156) are confusingly written and should be clarified.
- The Discussion section should provide more detail, rationale, and historical data (if any) using bevacizumab as part of LDM therapy.
- More details re: results from prior trials of LDM, esp in colon cancer, should be provided (refs 18-19).

Discretionary revisions:
- Consider including histopathology figure showing biopsy at time of original diagnosis, and perhaps again at surgery (if different in any way -- i.e. more areas of necrosis).

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
