Reviewer's report

Title: Prognostic Factors and Multidisciplinary Treatment Modalities of Brain Metastases from Colorectal Cancer: Analysis of 93 Patients

Version: 2 Date: 14 April 2015

Reviewer: Beste M Atasoy

Reviewer's report:

Thank you for inviting me to review this article that submitted to BMC Cancer. I am afraid this article is not relevant to publish in any journal. Surgery, SRS and WBRT are different options for brain metastasis in order to the number of metastasis. Based on its retrospective nature it is not clear how to choose the different treatment options according to their characteristics and especially numbers of metastasis which is very important in survival analysis. Therefore, we can not rely on and not reflect the knowledge to the clinic of the results reported in this study.

Level of interest: An article of insufficient interest to warrant publication in a scientific/medical journal

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
