Reviewer's report

Title: Subacute onset of blindness as manifestation of choroidal metastases from thymic carcinoma during pregnancy: Case Report.

Version: 3 Date: 20 July 2015

Reviewer: Visvaraja Subrayan

Reviewer's report:

General:
The style of English writing is much to be desired although at a first glance the grammar appears to be satisfactory. This is a common issue with non native English speakers and can be easily corrected with better editing.

Title:
I feel the title should be simplified to “Choroidal metastases from thymic carcinoma during pregnancy: Case Report.” The term “Subacute onset of Blindness” can be improved.

Abstract:
The discussion should be on choroidal metastases and not paraneoplastic syndromes. The authors should keep it in line with the title.

Case presentation:
“The decrease in visual acuity was initially interpreted as manifestation of the reappearing dermatomyositis and treated with steroids.” – Was the fundus checked then? Please give details as there maybe medicolegal implications.

Discussion:
The authors have not convincingly interpreted that the dermatomyositis is a paraneoplastic syndrome. Maybe this can be left out of the paper.
The discussion is too brief. It should be lengthened to discuss choroidal metastases in general and its manifestations. It should include a recent literature review of other uncommon tumours presenting with choroidal metastases. Also a discussion on the other metastases from thymic carcinoma should be included.
