Reviewer's report

Title: Anti-Hu Antibody associated Paraneoplastic Cerebellar Degeneration in Head and Neck Cancer

Version: 2 Date: 12 August 2015

Reviewer: Robert Rodnitzky

Reviewer's report:

This is a well written and well organized case report. The relative uniqueness of the their clinical finding makes it a useful addition to the medical literature.

I have only two minor comments that could be addressed in a minor revision.

#1 The CSF examination is reported as being "unremarkable". In the name of completeness the authors should state whether CSF cytology was performed to help rule out meningeal involvement the tumor, which in itself could have contributed to the clinical syndrome.

#2 The sentence on lines 140-141 regarding Carboplatin does not make sense to me as written, The authors should revise this sentence to make it more clear to the reader.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
