Title: Solitary plasmacytoma: Population-based analysis of survival trends and effect of various treatment modalities in the USA

Version: 1 Date: 07 Sep 2016

Reviewer: Laahn Foster

Reviewer’s report:

Please clarify statement "we found a significant difference in 5-year survival between patients > 50 years who were initially diagnosed with myeloma compared to those initially diagnosed with plasmacytoma and subsequently progressed to myeloma (15.4% vs 15.1%, p<0.031)"

The 15% looks similar, though the p value is significant.
