Reviewer’s report

Title: Successful treatment with anti-programmed-death-1 antibody in a relapsed natural killer/T-cell lymphoma patient with multi-line resistance: A case report

Version: 0 Date: 13 Apr 2017

Reviewer: Debmalya Bhattacharyya

Reviewer's report:

Several acronyms need to properly explained Such as ENKTL, ORR etc.

Some language corrections before publication.

The case report is interesting but not unexpected. As the authors mentioned similar results have been observed by Kwong et. al. 2017 in larger set of patients.
The authors need to highlight the significance of the case study and how it stands out, and compare to that of previous studies.

The pictorial evidence of receding ulcers in the hind limbs is very obvious. It would interesting to observe some biochemical evidences that show healing, reduction of inflammation etc.

Furthermore, the authors do not mention if there was any side effects of the treatment.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
