Title: The clonal evolution of two distinct T315I-positive BCR-ABL1 subclones in a Philadelphia-positive acute lymphoblastic leukemia failing multiple lines of therapy: a case report

Version: 0 Date: 06 Oct 2016

Reviewer: Julie Irving

Reviewer's report:

This is an interesting case report that furthers our understanding of bcr/abl mutations and their impact on response to bcr/abl inhibitors and other therapeutics.

Comments

Major

The concept of TKI resistant bcr/abl mutations existing prior to exposure because they are 'fitter' oncogenic proteins has been muted before and should be referenced here.

Minor

The depth of sequencing (mean and range) should be described in the text.

Figure 2 need a label on the Y axis.
