Reviewer’s report

Title: A pilot evaluation of magnetic resonance imaging characteristics seen with solid papillary carcinomas of the breast in 4 patients

Version: 1 Date: 26 May 2016

Reviewer: Mohammad Eghtedari

Reviewer's report:

This article is written very nicely on the MRI findings of a rare type of breast tumor. The number of cases that have been presented in this article is low; however, this can be explained by the rare nature of this type of tumor. Even with this limited number of cases, the description of MRI findings are useful for other investigators and clinicians who work in breast cancer imaging.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
