Reviewer’s report

Title: Pirfenidone as salvage treatment for refractory bleomycin-induced lung injury: a case report of seminoma

Version: 0 Date: 10 May 2017

Reviewer: Chang-Hsien Lu

Reviewer’s report:

1. This is an interesting case report about Bleomycin associated pulmonary toxicity successfully treated with Pirfenidone.

   It is well written but some correction of English grammar is needed.

2. Because BILI is a rarely seen clinical condition, would the authors briefly introduce the nature course (time sequence of exposure and recurrence?), dose association and diagnostic criteria in the this article?

3. The treatment experience of BILI is limited and mostly presented as case report in the literature.

   Would the author show the difference of these reports in Table?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
