Reviewer’s report

Title: Uncommon presentation of a rare tumor - incidental finding in asymptomatic patient: case report and comprehensive review of the literature on intrapericardial solitary fibrous tumor

Version: 1 Date: 19 Jun 2017

Reviewer: Boris Sepesi

Reviewer's report:

This is an interesting and well written case report. Solitary fibrous tumors are rare tumors and mostly arise in the pleura. They may grow to a very large size, but surgical resection is usually curative if the histology is benign. Pericardial SFT is much more rare. Authors should be commended for this report and management of this patient, who required partial resection and reconstruction of the pulmonary artery. The manuscript is well written, and diagnostic and perioperative images demonstrate a nice story about the management of this patient.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
