Reviewer’s report

Title: Exercise and Cancer-Related Fatigue in Adults: A Systematic Review of Previous Systematic Reviews with Meta-Analyses

Version: 0 Date: 26 Jul 2017

Reviewer: Sungjin Kim

Reviewer's report:

Overall:

The authors well described the results of a systematic review of previous systematic reviews regarding exercise effect on cancer-related fatigue in adults regardless of a type of cancer.

However, even though the manuscript is well-written overall, it may be shortened or sub-sectioned as readers may find this manuscript difficult to follow. The authors may leave only essential information in the main body of the manuscript, and move less indispensable descriptions to supplementary documents.

Minor:

(1) Have the authors ever conducted a systematic review of exercise on cancer-related fatigue by cancer type? It would be good to know if there are different exercise effects on cancer-related fatigue for different cancer types.

(2) ‘x ± SD’ would better be replaced with 'mean ± SD' throughout the manuscript.

(3) Figures 2-5 would look better if they are in the same style.
Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review
