Reviewer's report

Title: Transcatheter arterial chemoembolization plus sorafenib versus transcatheater arterial chemoembolization alone to treat advanced hepatocellular carcinoma: A meta-analysis

Version: 0 Date: 30 May 2017

Reviewer: Yunpeng Hua

Reviewer's report:

1. The authors indicated that the results after the combination of sorafenib with TACE for patients with advanced HCC are disputable. But I don't know any disputable questions in the article. Please give us some related reports to introduce this situation in the part of Introduction or Discussion.
2. Why were all 12 studies collected in this study from Chinese? Are there not the similar data from the other countries?
3. In addition, the explanation for the limitation in the Discussion is not very suitable.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
Quality of written English
Please indicate the quality of language in the manuscript:
