Reviewer’s report

Title: Colorectal cancer liver metastases - a population-based study on incidence, management and survival

Version: 0 Date: 30 Apr 2017

Reviewer: Armin Wiegering

Reviewer's report:

Overall this is a very interesting paper with a high number of patients included and with overall important results. Never the less the result section has to be re-written as it is very confusing. Especially it is unclear when the liver metastasis occurred (syn vs, met.). Also some sentence does not fit to the figures. e.g. "The 1- and 5-year survival of patients with liver metastases treated with resection, palliative chemotherapy or BSC were 92.8% and 48.6%, 58.1% and 2.2% and 8.2% and 0.0% respectively, counting from the date of diagnosis of liver metastases as outlined ..."

over all I recommend major revision

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
Quality of written English
