Title: Characteristics of people living in Italy after a cancer diagnosis in 2010 and projections to 2020

Version: 1 Date: 17 Nov 2017

Reviewer: Sandra Mallone

Reviewer’s report:

The topic is interesting since (complete) tumour prevalence is not frequently estimated. The objectives of the study are clearly stated, the study is based on a large set of high quality data, has an appropriate and consolidated methodology and the conclusions drawn are supported by the data. The manuscript is well written and enables the reader to understand a method which is actually complex.

The findings are discussed coherently and the projections at 2020 are extremely useful to epidemiological researchers and clinicians, and essential for allocating health care resources in Italy.
