Reviewer’s report

Title: Changes in CT morphology can be an independent response marker for patients receiving regorafenib for colorectal liver metastases: retrospective pilot study

Version: 1 Date: 19 Jan 2017

Reviewer: Weizhou Hou

Reviewer’s report:

In this article the author talked about new idea how a non-size-based CT morphologic response could be a potential 7 prognostic marker for colorectal liver metastases cancer. That's very interesting. Targeting liver metastases is a good model for CT scan.

Major comments:

1. The idea is interesting. But CT morphologic response maybe full of challenge to cancer patient and doctor.

2. If this article can show more data to compare to cancer cell morphologic response in vitro, that will be better.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
