Title: Salivary extracellular vesicle-associated miRNAs as potential biomarkers in oral squamous cell carcinoma.

Version: 1 Date: 28 Nov 2017

Reviewer: Cathie Garnis

Reviewer's report:

Please include all comments for the authors in this box rather than uploading your report as an attachment. Please only upload as attachments annotated versions of manuscripts, graphs, supporting materials or other aspects of your report which cannot be included in a text format.

Please overwrite this text when adding your comments to the authors.

While the authors have made a good attempt at addressing the initial reviewer comments the fact that multiple test correction was not done means the stats are incorrect and should be reported as such.

Additionally it is not mentioned how the individual qRTPCRs were normalized. Global mean will work when looking at several hundred microRNAs but cannot be used when only looking at a few candidates. What was used for normalization?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
