Reviewer’s report

Title: CCNE1 Amplification Is Associated with Poor Prognosis in Patients with Triple Negative Breast Cancer

Version: 0 Date: 25 Nov 2018

Reviewer: Anindita Chakrabarty

Reviewer’s report:

This is a very nice study aiming to uncover the genetic heterogeneity of paired primary and metastatic TNBC with two independent sample sets, pilot and discovery-TNBC. This study revealed coexistence of CCNE1 and TPX2 amplification in metastatic lesions. CCNE1 amplification was further associated with poor overall survival and possible mechanism of chemoresistance. Even though this was small-scale study it was thoroughly done. Recommendation: accept.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
