Reviewer’s report

Title: Risk Prediction for Breast Cancer in Han Chinese Women Based on a Cause-Specific Hazard Model

Version: 1 Date: 16 Nov 2018

Reviewer: Yubei Huang

Reviewer's report:

Although the authors have listed several new reasons or hypotheses for the low uptake of BCRAT and high proportions for the insufficient information for calculating Gail risk, these new reasons or hypotheses cannot directly support that this study have gained the expected results. Namely, even though these physicians have learned the knowledges and importance of BCRAT, they did not or cannot use these knowledges in their daily practice. In addition, the sample size is so small.

Therefore, if no further strong and direct analyses or evidences to support their conclusions, this education program should not be easily considered as "successful".

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
Quality of written English
