Title: Identification of candidate breast cancer predisposing variants by performing whole exome sequencing on index patients from BRCA1 and BRCA2-negative breast cancer families

Version: 2 Date: 28 Feb 2019

Reviewer: Michel – Longy

Reviewer's report:

The second version of the paper by Rajendra Bahadur Shahi et al. takes into account the two main recommendations I made i.e. i) to provide the list of genes showing an enrichment of high impact mutations in breast cancer patients compared to controls, at the exome level and ii) to specify the population frequency of deleterious mutant alleles in candidate genes. I therefore think that the presentation of this work is substantially improved and that this paper is acceptable for publication.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.
