Title: FKBPL and its peptide derivatives inhibit cancer stem cells and breast cancer metastasis by downregulating DLL4 and Notch4

Version: 1 Date: 24 Feb 2019

Reviewer’s report:

The overall writing of this article is good and logical, but there are still some problems as follows:

1. There is no p value showing in the picture C and D of figure 6, and in the picture D-2 of figure 2.

2. The manuscript reveals that FKBPL and its peptide derivatives inhibit cancer stem cells and breast cancer metastasis by downregulating DLL4 and Notch4. So my suggestion is that the author should upregulate DLL4 and Notch4, and then observe that if FKBPL and its peptide derivatives can still inhibit cancer in vitro or vivo.
