Reviewer’s report

Title: Regression of solid breast tumours in mice by Newcastle disease virus is associated with production of apoptosis related-cytokines

Version: 1 Date: 28 Dec 2018

Reviewer: John D. Haley

Reviewer's report:

The manuscript is improved. Several points need to be addressed:

Figures 3-8 are missing key information from the x axis. The is important.

Also the y-axis (ELISA SPOT) should be expressed in ng/ml or pg/ml or molar concentrations relative to control values for each cytokine from the BD Science kit. Otherwise good.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
