Reviewer's report

Title: Abscopal effect of radiation on multiple lung metastases of lung adenocarcinoma: a case report

Version: 1 Date: 19 Feb 2019

Reviewer: Kenji Sekiguchi

Reviewer's report:

The reviewer is grateful for the revision. However, the details of radiotherapy should be precisely described.

Firstly, the target was irradiated with the "opposing anterior-posterior fields". Moreover, the description of "multiple beams" in line #93, page 7 is vague. How did she treated thereafter? Multiple (how many) static or arc radiotherapy? Anyway, you can say only a small amount of lung volume got away of irradiation. So, the authors should demonstrate the complete disappearance of "out-of-fields" metastases in the text and figure.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
