Title: Gemcitabine and docetaxel combination chemotherapy for advanced bone and soft tissue sarcomas: protocol for an open-label, non-randomised, Phase 2 study

Version: 1 Date: 02 Jun 2019

Reviewer: Sandro Pasquali

Reviewer's report:

Although the text has been improved, the limitations of the study protocol have not been improved. Comments of both reviewers have been addressed without resulting in modification of the study protocol. This is of great importance as Authors are seeking approval for the drug combination in Japan. Compromising the study design will not allow this study to reach its target.

Are the methods appropriate and well described?
