Reviewer’s report

Title: Stereotactic Ablative Radiotherapy for the Comprehensive Treatment of 4-10 Oligometastatic Tumors (SABR-COMET-10): Study Protocol for a Randomized Phase III Trial

Version: 0 Date: 15 May 2019
Reviewer: Shalini Kavita Vinod

Reviewer's report:

This is a very well written study protocol to address a topic of considerable interest where high quality evidence is lacking. The emphasis on safe delivery of SABR (with priority given to OAR doses over tumour coverage, peer review of treatment plans and QA) is important given previous published reports of treatment related mortality with SABR. The authors are also commended in including translational endpoints.

Are the methods appropriate and well described?  
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?  
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?  
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?  
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
