Reviewer’s report

Title: Stereotactic Ablative Radiotherapy for the Comprehensive Treatment of 4-10 Oligometastatic Tumors (SABR-COMET-10): Study Protocol for a Randomized Phase III Trial

Version: 0 Date: 20 May 2019

Reviewer: Rodney Wegner

Reviewer’s report:

This is a well-written, well-designed trial from experts on the topic. The protocol includes a nice summary of the data to date, as well as rationale for designing/performing this study in a setting of 4-10 metastatic lesions. The criteria are well-defined but not too constricting, and the multiinstitutional nature of the trial will help allow for accrual to be met. The outcomes are defined well, and I appreciate that safety is given great importance with no allowable exceeding dose constraints given the nature of the patient population.

I would suggest acceptance with no edits/revisions.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
