Author’s response to reviews:

Editor Comments:

1. Thank you for clarifying that consent to participate was not required as "Because patient data in the SEER database were de-identified, signed informed consent was waived for the present study". Please include a statement to this effect in your 'Ethics Approval and Consent to Participate' section.

Response: We have revised the manuscript as you request.

2. At this stage, please upload your manuscript as a single, final, clean version that does not contain any tracked changes, comments, highlights, strikethroughs or text in different colours.
All relevant tables/figures/additional files should also be clean versions. Figures (and additional files) should remain uploaded as separate files. Please ensure that all figures, tables and additional/supplementary files are cited within the text.

Response: We have revised the manuscript as you request.
