Reviewer’s report

Title: Postoperative chemoradiotherapy is superior to postoperative chemotherapy alone in squamous cell lung cancer patients with limited N2 lymph node metastasis

Version: 1 Date: 30 Jun 2019

Reviewer: Lijun Xue

Reviewer's report:

The revised manuscript has been improved with some changes or explanations according to the comments and suggestions of reviewers. Personally, the conclusion may be not appropriately achieved because "there was only one patient with T4 disease after PSM" in the present series. However, as concluded by authors, "POCRT following complete resection may be beneficial ... particularly those with limited nodal involvement and T4 disease".

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review
