Reviewer’s report

Title: Screening differentially expressed genes of pancreatic cancer between Mongolian and Han people using bioinformatics technology

Version: 2 Date: 25 Dec 2019

Reviewer: Helmut Friess

Reviewer's report:
I don't think that my concerns regarding this manuscript are adequately addressed in this revision. First of all, it is NOT OK to show only the results of 20 samples if 40 samples were initially analysed for question 2. As for question 3, the authors need to explain the data of "non-neoplastic adjacent tissue fully". This manuscript cannot be accepted unless these two questions were fully addressed.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
