Reviewer's report

Title: Intraocular lens dislocation and tube shunt in the posterior chamber

Version: 4  Date: 19 May 2015

Reviewer: Chan Yun Kim

Reviewer's report:

This report described the complex case of tube location change with IOL dislocation. This case may be rare. But it does not seem to be interesting or new enough for considering a publication. This report did not show new surgical techniques or new findings. Repositioning of tube with vitrectomy does not seem to be new or informative.

Level of interest: An article of insufficient interest to warrant publication in a scientific/medical journal

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
