Reviewer’s report:

'Successful displacement of a traumatic submacular hemorrhage in a 13-year-old boy treated by vitrectomy, subretinal injection of tissue plasminogen activator and intravitreal air tamponade: a case report'

The author described an interesting case of submacular hemorrhage treated with vitrectomy and subretinal injection of tissue plasminogen activator.

Page 6 line 6, the patients had a blunt trauma by hitting by a sinker. The situation needs to be discussed in more details like what kind of sinker, fishing?, etc.

Page 6 line 9, “balbar’ may be ‘bulbar’

Page 6 line 18, ‘We therefore diagnosed submacular hemorrhage……, due to choroidal rupture…” need to be deleted because preoperative OCT and micriperimetry failed to detect choroidal rupture and it was found postoperatively.

Page 7 line 6, ‘Kimura et al [8,9]’ may be ‘Kimura et al [8]’

Page 9 line 7, The following sentence needs to re worded, ‘we took the view that if choroidal neovascularization developed, …..”

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
