Title: Acute Angle-Closure Glaucoma in Retinopathy of Prematurity Following Pupil Dilation

Version: 2 Date: 24 April 2015

Reviewer: Gloria Roberti

Reviewer's report:

Major Compulsory Revisions

Dear authors,

this case report is interesting.

However, you should clarify better your findings.

I suppose you dilated the baby to perform laser treatment and the IOP was normal. After the scleral buckling the pupil dilation caused the angle closure. Why didn't you think to perform the UBM before the dilation?

Do you have many cases of ROP in your country?

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
