Reviewer's report

Title: Acute Angle-Closure Glaucoma in Retinopathy of Prematurity Following Pupil Dilation

Version: 2 Date: 27 April 2015

Reviewer: Luciano Quaranta

Reviewer's report:

This is a very interesting case report. I suggest the authors to explain why did they choose to perform trabeculectomy instead of phaco+IOL. I had a similar case and I performed phaco with nice resolution of high IOP.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
