Reviewer’s report

Title: Two cases of biodegradable collagen matrix (ologenTM) implant and conjunctival autograft for scleral necrosis after pterygium excision

Version: 2  Date: 9 July 2015

Reviewer: ebru toker

Reviewer’s report:

In this study, the authors describe the use of a biodegradable collagen implant to treat scleral thinning and necrosis after pterygium excision with MMC. It is an interesting topic. Collagen implant combined with conjunctival autografting seems to be an easy, promising new treatment alternative for this difficult to treat, troublesome not uncommon complication of pterygium surgery.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
