Reviewer's report

Title: Surgical Outcomes of 23-gauge Transconjunctival Pars Plana Vitrectomy Combined with Lensectomy for Glaucomatous Eyes with Extremely Shallow Anterior Chamber and Cataract

Version: 2  
Date: 4 September 2015

Reviewer: Luciano Quaranta

Reviewer's report:

This is an interesting paper on an important topic. I suggest the authors to comment the literature regarding FACO without vitrectomy in the discussion, I suggest the authors to try to include a more uniform population in the analysis.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
