Reviewer's report:

I have no more comments or questions

Just two clarifications

Q3-4. If you were added that information among the groups prior to any surgeries you would have made your paper stronger and you would have contributed to the literature with useful information because neither you (the researcher) nor me (the readers) know why one groups was stable and one group deteriorated requiring more surgery.

Q6. Your surgeries were not planned for the near angle. You classified the patients using the near and distance angle. But you operated for the distance angle.

Are the methods appropriate and well described?
