Reviewer’s report

Title: Clinical efficacy of implantation of toric intraocular lenses with different incision positions: a comparative study of steep-axis incision and non-steep-axis incision

Version: 0 Date: 29 Apr 2017

Reviewer: Ceyhun Arici

Reviewer's report:

As mentioned by authors, toric intraocular lenses have been used extensively in cataract surgery. The toric power of lenses are calculated according to the keratometric values and the angle of main corneal incision.

The study is useful especially to show step axis incision to decrease high-order spherical aberrations which is one of main optical disorder to affect visual acuity apart from diffraction, scattering and accommodation.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review
