Reviewer’s report

Title: Semi-automated quantification of hard exudates in colour fundus photographs diagnosed with diabetic retinopathy

Version: 0 Date: 24 Jul 2017

Reviewer: Shintaro Nakao

Reviewer's report:

This retrospective study by Marupally et al. developed the semi-automated method of quantification of hard exudates in diabetic retinopathy. The author compared their developed method with previously shown method. My comments are shown as below.

The author excluded cotton wool spots, optic disc and retinal vessel reflections. Is there possibility that this method could detect drusen?

Page 2 and page 4: Hard exudates is not only derived from lipid deposits. A few papers should be cited about hard exudate characteristics.

High-Resolution Imaging by Adaptive Optics Scanning Laser Ophthalmoscopy Reveals Two Morphologically Distinct Types of Retinal Hard Exudates.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes
Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review
