Title: Descemet Membrane Detachment in Femtosecond Laser-Assisted Cataract Surgery: A Case Report

Version: 0 Date: 30 Jul 2017

Reviewer: Yong Wang

Reviewer's report:

General Comments:

The paper entitled "Descemet Membrane Detachment in Femtosecond Laser-Assisted Cataract Surgery: A Case Report (BOPH-D-17-00386)” by Chen P et al, has a potential to be accepted, but some important points have to be revised or fixed before the publication. I here summarize these points.

Comment 1.

How much intracameral perfluoropropane (C3F8) gas (14%) injection was injected to anterior chamber. And which incision (main incision or side incision) did C3F8 inject through?

Comment 2.

In the "Case Report Section", Line50-53 is as follows: "A topical steroid and a nonsteroidal anti-inflammatory drug (NSAID) were prescribed for the patient”. Please explain the frequency of eye drops.

Comment 3.

If the severe corneal edema had last one week, why not perform the OCT check at that time.
Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.
Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.
Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
Not relevant to this manuscript

Quality of written English
